

MSDS 7330

File Organization and Database Management

Mini Project 3

Name:

This is a mini project for MSDS 7330, File Organization and Database Management. For this assignment, turn in a single pdf file containing all of your answers. The file should be named ;yourLastName;MiniProject-Number.pdf. For example, the file name for my mini project 1 would be 'RafiqiMiniProject-1.pdf'. Insert your answer pages into this file with the answer for Question 1 inserted immediately after Question 1 and before Question 2, the answer for Question 2 inserted immediately after Question 2, and the answer for Question 3 inserted immediately after Question 3. You may insert a front page containing your name and date if you do not wish to or cannot electronically add that information to the first page of this homework sheet.

Collaboration is expected and encouraged; however, each student must hand in their own homework assignment. To the greatest extent possible, answers should not be copied but, instead, should be written in your own words. Copying answers from anywhere is plagiarism, this includes copying text directly from the textbook. Do not copy answers. Always use your own words and your own code. Directly under each question list all persons with whom you collaborated and list all resources used in arriving at your answer. Resources include but are not limited to the textbook used for this course, papers read on the topic, and Google search results. Don't forget to place your name on the first page of the pdf document.

MySQL Database

Question 1 : Use the Sales Order Database created during previous week InClass lab and answer following queries using MySQL Workbench. I am also attaching script to create and populate the database in case you don't have it. Submit screen shots of queries along with screen shots of results. If results are longer than one page then simply provide number of rows returned from the query. Answers for the following queries:

- 1) Display the customers who have never ordered bikes or tires.
- 2) List the customers who have purchased a bike but not a helmet.
- 3) Show me the customer orders that have a bike but do not have a helmet.
- 4) Display the customers and their orders that have a bike and a helmet in the same order.
- 5) Show the vendors who sell accessories, car racks, and clothing.

Capture the sequence of queries and resulting output thereby demonstrating your database in operation. Turn in a pdf of your database in operation.

Resources:

Question 2 : Python – Write a Python Script that will connect to the Sales Order database and execute queries from question 1. The python script will connect to the MySQL database using MySQL connector and then you will execute the query using cursor. To make it easier simply define the query in the beginning of the program. Submit complete python script.

Hint:

```
Import MySql connector
Define server name, user name, password
connect to the database
initialize cursor, execute query
```
